

FTP was born in the 70s. Are you still using it? Seriously? Maximize file transfer speeds with FileCatalyst.

Moving files is a critical process for your organization. FTP can be slow and unreliable, a combination that causes lost productivity and frustration. International file transfers are especially bad, frequently disconnecting and almost never reaching full line speed. Predictability and guaranteed delivery are virtually impossible with FTP.

Transfer files up to 100X faster with FileCatalyst Direct

FileCatalyst Direct is a software-only file transfer solution that provides speed, security, and reliable delivery. The FileCatalyst protocol creates a connection that is immune to poor network conditions, resulting in file transfers that are up to 100X faster (or more) than FTP.

The FileCatalyst Platform

All products in the FileCatalyst family are designed to work together. On its own, FileCatalyst Direct uses the FileCatalyst Server and the full range of client options for point-to-point transfers. Combining FileCatalyst Server with our Webmail or Workflow applications provides a complete accelerated web-based solution.

benefits

FileCatalyst Direct includes desktop and web-based remote administration for our Server and HotFolder applications. For the Enterprise, the Monitoring Agent continually checks on the status of FileCatalyst Servers and HotFolders, sending email notifications or SNMP traps to notify administrators should any issues arise.

During your free trial, our team will help identify which combination of tools is right for your needs.

- Transfer files up to 100X faster (or more) than FTP
- Cross-platform architecture
- Monitor filesystem in realtime to trigger new transfers based on changes
- Server-based license: no additional cost for unlimited use of client applications
- Manage connections and bandwidth
- Guarantee and prioritize delivery
- Software only: no hardware upgrades
- Authenticate with user accounts or LDAP, Active Directory or database
- Send partial files (“deltas”) for huge files to reduce amount of data sent
- Meet security mandates like HIPPA, SOX and GLB with SSL and AES
- Available SDK puts the power of FileCatalyst Direct into your application
- Transfer over UDP(S), FTP(S), or HTTP(S)
- Web-based file transfer and administration tools
- Email and SNMP notifications

FileCatalyst Direct provides the tools you need to enhance or create a managed and accelerated file transfer solution
